non responsive

Re: Laboratory Results for the Soil Samples Collected by EPA non responsive

Dear non responsive

As part of the U.S. Environmental Protection Agency's (EPA's) on-going investigation at the Eighteen Mile Creek Superfund Site, EPA conducted additional soil sampling at residential properties adjacent to the Former Flintkote Plant Property. The sampling was conducted to determine if additional properties have been impacted by the Site. Your property at non responsive was sampled as part of this effort. Enclosed is a copy of the laboratory results that we discussed over the phone on 3/16/2018. The spreadsheet provides soil sampling results from your property identifying the concentrations of various metals, including lead, at different depths (e.g., 2 inches to 2 feet).

EPA is currently evaluating the laboratory results for various properties sampled to determine whether any properties may require remediation. Until EPA makes a decision regarding the potential need for any action on your property, attached is a fact sheet describing ways to reduce potential exposure to lead that may be present in soil. As we discussed, preventative measures include:

- Washing hands thoroughly after coming into contact with soil.
- Taking shoes off at the door to reduce dirt that may be brought into the house on the shoes.
- Regularly cleaning the house of dust and tracked in soil.
- Bathing pets to reduce dirt brought into the house on their paws.
- Avoiding activities that could disturb soil, including gardening.

The enclosed fact sheet was developed by the Agency for Toxic Substances and Disease Registry, part of the Centers for Disease Control and Prevention. The fact sheet answers frequently asked health questions about lead and is typically provided at sites where EPA is evaluating potential lead exposures.

If you have tenants who reside at this property, please share the results and a copy of the lead fact sheet with your tenants.

As EPA continues to evaluate these results, I will contact you as soon as we have additional information. If you would like to discuss these results in further detail, or if you have any questions or concerns, please feel free to contact me at (212) 637-4317 or Kondrk.Jaclyn@epa.gov.

Sincerely,
